PROJECTS

PRUS: Product recommender System Based on User Specifications and Customers Reviews

- o This project introduces a novel product-ranking approach called PRUS that incorporates both positive and negative polarities from online product reviews.
- o The method dissects reviews into sentence-level components to determine sentiment polarity and link it to key features.
- o Using the Amazon review dataset, the model evaluates product rankings using metrics like Rank Score (RS) and Normalized Discounted Cumulative Gain (nDCG).
- o The results highlight PRUS's ability to prioritize products based on user-specific needs and feature preferences, empowering users to make more informed decisions.
